The ALC 77 Series are counters that perform forward / reverse counting at a high input frequency of 600 KHz in quadrature mode (4 multiplier) to which sensors such as encoders that transmit digital pulse signals are connected. Thanks to the high input frequency, encoders with high resolution and high speeds can be connected. A and B encoder with pulse signals or NPN / PNP signal input

With the help of the buttons on the device is very easy to use and can be adjusted easily. The relay contact outputs can be set in 11 different modes. Sensors such as rotary encoders, linear encoders, limit switches commonly used in the machinery and automation sector can be connected.
