

The ultrasonic sensors send and detect high-frequency ultrasonic sound with a piezoelectric transducer. A part of the reflected sound wave by hitting the measuring surface is detected by the transducer, depending on the speed of the signal in the air, the distance of the objects is determined. When the specified switching point is reached, the output is switched. The measured value is given as analog (0 ... 10 V, 0...20 mA, 4 ... 20 mA) or CANopen signal.

With ultrasonic sensors, objects can be reliably detected and measured regardless of material, color, transparency and surface properties.

ULT series ultrasonic sensors, designed and manufactured by Atek Sensors R&D engineers, are used in contactless and level measurements of liquid and solid materials in open and closed tanks. It is very easy to install with its small body structure.

GENERAL FEATURES

- Ultrasonic working principle
- Different measuring options up to 6 meters
- Acid-proof option
- Non-contact and high precision measurement
- $\pm 0.2\%$ FS accuracy
- RS-232, RS-485, CANopen serial connection options
- 4-20 mA, 0-20 mA, 0-10V analog output options
- 2 pcs switch output (PNP open collector)
- IP67 high protection class
- Small structure
- Economical and maintenance-free design
- Easy installation

APPLICATION AREAS

- Level measurement, pump control in tank, warehouse etc.
- Occupancy rate calculation in product warehouses
- Treatment plants
- Food industry
- Chemical industry

MOUNTING

Measuring Distance and Angle

L	ULT30-40		ULT30-75, ULT30-75A	
	30°		12°	
	OPTIMUM	MINIMUM	OPTIMUM	MINIMUM
	D			
1m	60 cm	60 cm	20 cm	15 cm
2m	110 cm	80 cm	35 cm	25 cm
3m	160 cm	110 cm	55 cm	50 cm
4m	220 cm	130 cm	70 cm	60 cm
5m	270 cm	140 cm	-	-
6m	330 cm	150 cm	-	-

L indicates the mounting height and there should be no obstacle which blocks signals in D width. These values are optimally included in the table above. If optimum dimensions are not followed, level measurement is made, but measurement accuracy decreases.

If it is not possible to install in optimum dimensions, the minimum dimensions must be followed.

Mounting Warnings

- For level measurement, the sensor must not be installed near the tank input.
- It is recommended that the sensor be protected against sun and rain.

- The sensor must be installed perpendicular to the surface to be measured and should not be placed close to the side surface.

ANALOG OUTPUT AND SWITCH CONFIGURATION WITH MAGNET

Device has 4 settings values.

- 1-Analog minimum point: After which value will it start to analog value.
- 2-Analog maximum point: The final point that analog output will value.
- 3-Switch Out1 Set point menu: Output will high at this set point.
- 4-Switch Out1 Set point menu: Output will high at this set point.

If the magnet is touched for less than 5 seconds, the current position of the device is the set point.

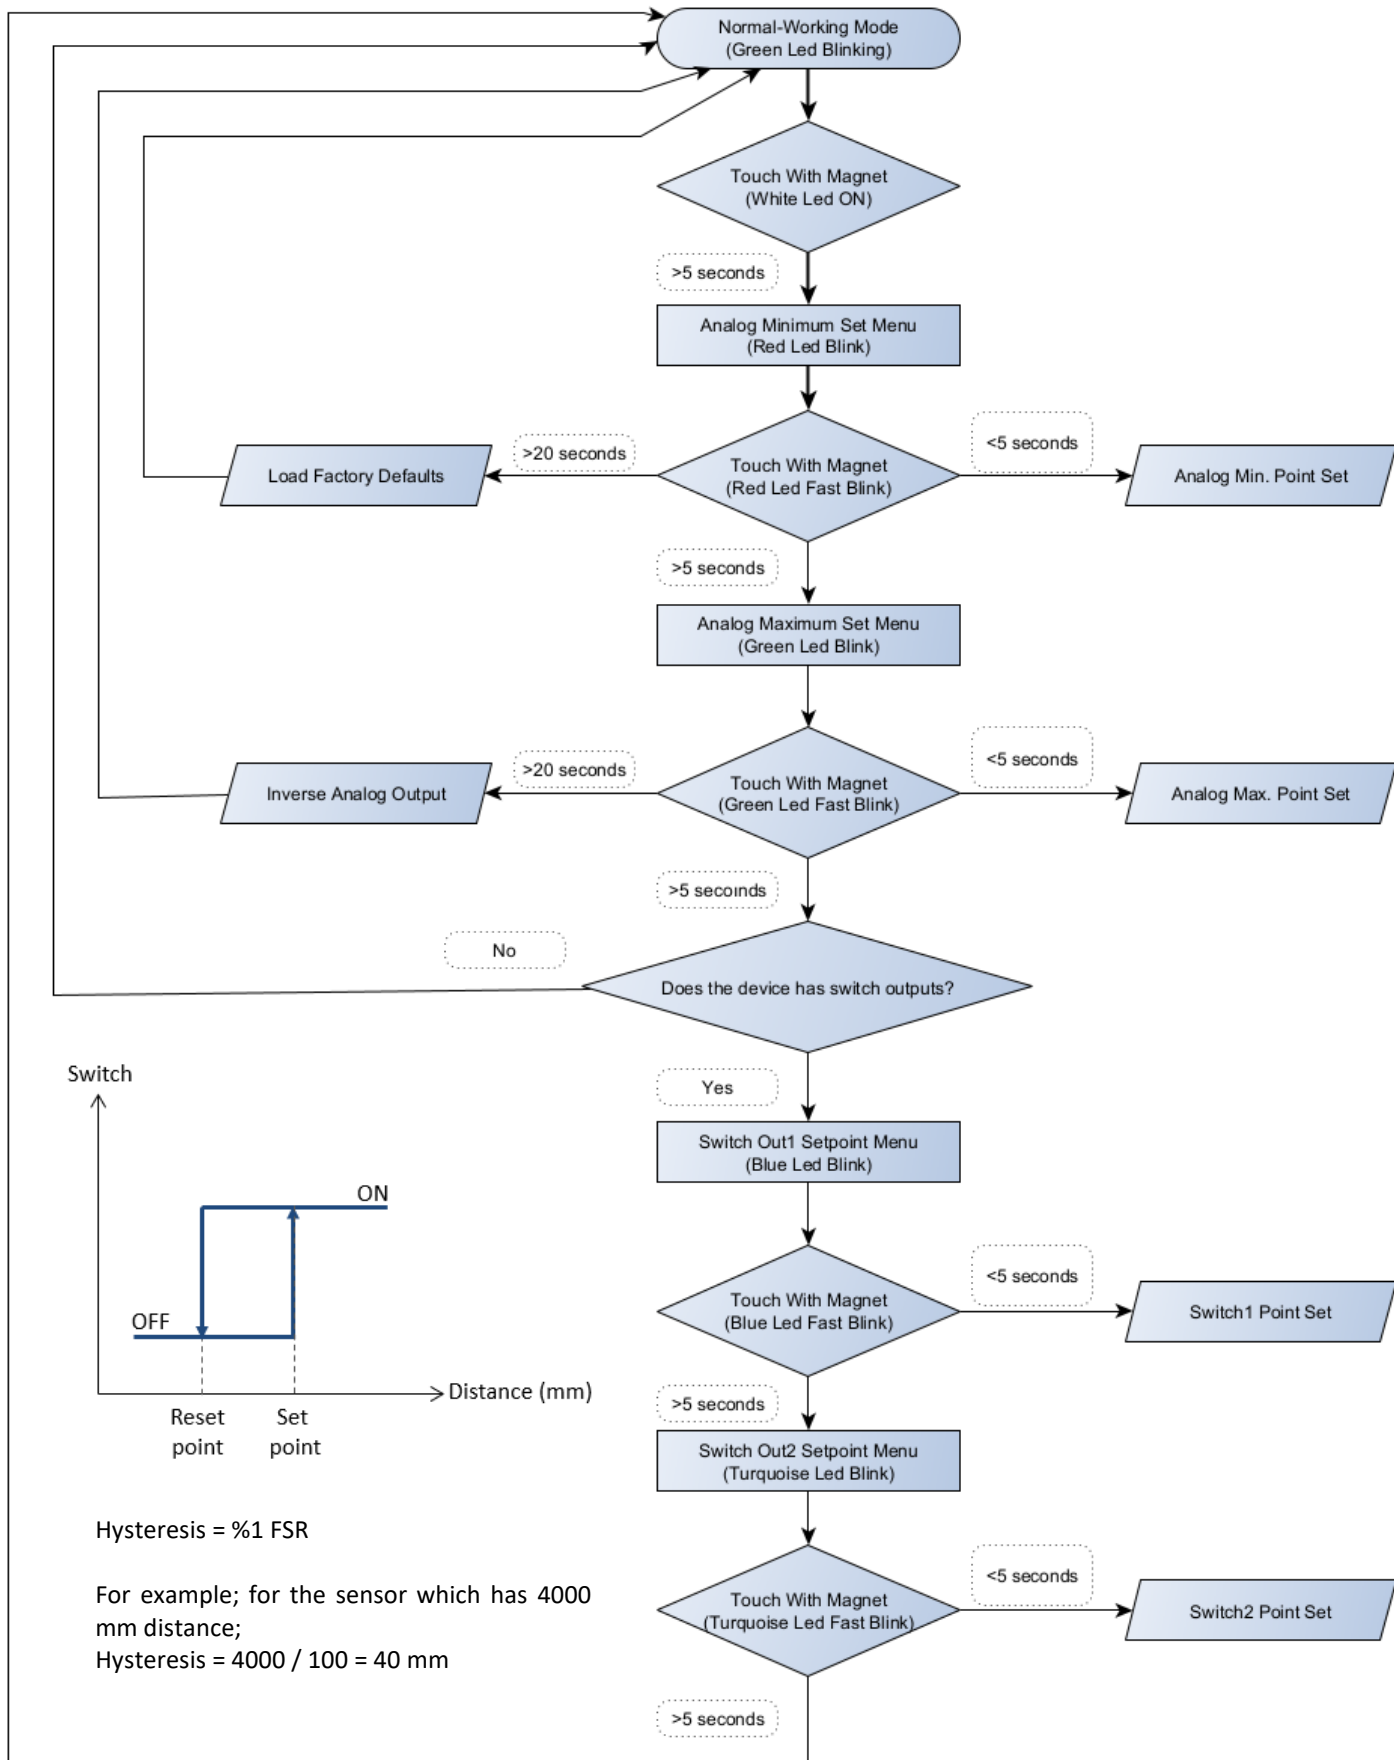

If the magnet is touched for more than 5 seconds, and less than 15 seconds, device passes to the next menu.

If the magnet is touched for more than 20 seconds in first and second menu, device loads factory default if it is in first menu, device inverse analog output if it is in the second menu.

The zone where the adjustment magnet is approached

CONFIGURATION FLOWCHART

Hysteresis = %1 FSR

For example; for the sensor which has 4000 mm distance;
 Hysteresis = 4000 / 100 = 40 mm

- (1) Housing Material:
 ULT30-40:316L, ULT30-75:316L or Delrin, ULT30-75A:Teflon can be selected.
- (2) The product can be requested with cable or connector. In models with socket; S13F code socket should be selected only when product with analog output is desired. If different outputs are desired in addition to analog output, S14M code socket should be selected. ULT30-75A product is only produced with cable in terms of acid resistance. Only analog output can be selected in the ULT30-75A.
